File Structure in Mary Loomis Data Projects

A well-organized file structure is vital for managing complex data projects, facilitating collaboration, and ensuring reproducibility. Mary Loomis advocates for a logical, hierarchical organization that separates raw, processed, and output files.

Typical Directory Layout

A standard Mary Loomis data project might follow this structure:

- `/raw_data/` Contains all original, unaltered data files received from sources.
- `/processed_data/` Stores cleaned and transformed datasets ready for analysis.
- `/scripts/` Includes all code scripts used for data cleaning, transformation, and analysis.
- `/outputs/` Houses results such as tables, graphs, and reports.
- `/documentation/` Maintains documentation files, data dictionaries, and version histories.
- `/temp/` Temporary files created during processing, to be cleaned up after.

Naming Conventions

Consistent naming conventions improve clarity and ease of access. Recommended practices include:

- Use descriptive names with dates or version numbers (e.g., ``student_scores_v1.csv``, ``raw_data_2023_10_01.xlsx``).
- Separate words with

underscores for readability (e.g., ``school_data_cleaned.csv``). Include the stage or purpose in the filename (e.g., ``data_cleaning_script.py``).

Managing Metadata

Metadata files provide context and documentation for datasets, including:

- Variable descriptions
